Dogs are well－loved animals.However，man's very cute friend is also known for some habits.For example，they often snack on a pile of poop（粪便）.

Why do dogs eat poop？ There isn't a single explanation.Dogs can't tell us what they're thinking.But researchers may have discovered a number of different reasons for that.

Poop eating is quite common among baby dogs.It is believed that they learn it from their mother.To keep her babies safe，a mother dog will eat her own poop and her babies' as well.There are often parasitic eggs（寄生虫卵） in the poop.Eating the poop will prevent the eggs from developing into parasites.

Medically speaking，if a dog isn't getting enough nutrition（营养）from its food，then it's very likely that their digestive system（消化系统） isn't working very well.Because of this，there is a good amount of nutrition left in their poop.This could cause them to eat this"food".Similarly， if a dog gets ill， it will not be able to take in enough nutrition.Then they'll look for other sources of nutrition－their poop and other animals' poop.

However， this behavior isn't always because of poor health.Boredom may also cause dogs to eat their own poop.Besides，if eating poop gets their owners' attention，they might repeat this behavior.

A habit for cleanliness also plays a part.Dogs may simply eat their poop to keep their environment clean for themselves.Some dogs have been trained to remember that pooping in the house is bad.They may even be punished for
